

1 **WHAT IS CLAIMED IS:**

2 1. A parquet block with a woodwork joints having
3 four sides ;
4 a longitudinal notch having a short upper side and a long lower side
5 with a distal edge and defined at one of the sides near the upper side edge of the
6 parquet block;

7 a longitudinal tongue having a short upper side and a long lower side
8 with a proximal edge and defined on a side opposite to the longitudinal notch
9 of the parquet block to be inserted into the longitudinal notch in an adjacent
10 parquet block;

11 two transverse tongues having a width and defined respectively on the
12 sides different from the longitudinal notch and the longitudinal tongue; and

13 two transverse grooves having a width equal to the width of the
14 transverse tongues and defined respectively beside the transverse tongues so
15 that a transverse tongue on an adjacent parquet block can be mounted inside the
16 adjacent transverse groove.

17 2. The parquet block with the woodwork joint as claimed in claim 1,
18 wherein

19 the longitudinal notch further comprises an upward protrusion formed
20 on the distal edge of the longitudinal notch, and

21 the longitudinal tongue further comprises a longitudinal detent defined
22 on the proximal edge of the long lower side of the longitudinal tongue.
